Flush Textured Panel

Textured panels provide a much softer look that blends well with stucco or concrete buildings. This is a locking panel with concealed fasteners.

- Material: 20ga steel
- Length: Up to 20'. Extra charges may apply for lengths shorter than 4'.
- Finish: Factory applied textured paint, simulates stucco finish.
- Colors: Choose from standard color chart or Custom match to any color (no additional cost).
- Warranty: 20 years.
- Installation: Lock together with concealed fasteners. Designed primarily for vertical applications. If used horizontally, the panels will not lap end to end, so special backing plates and trim covers must be used.

Oil canning, a slight rippling effect due to expansion and contraction, is an inherent property of flat metal products and is not a cause for rejection. Non ribbed style panels are particularly vulnerable to oil canning. Please see our technical bulletin titled, "Oil Canning" at https://www.roofscreen.com/mediafiles/download_downloads/112_RoofScreen_Oil-Canning_Bulletin.pdf
